The following Listing of Claims will replace all prior versions, and listings, of claims in the application:

## Listing of Claims

We claim:

- 1. (Currently Amended) A transdermal drug delivery device for delivering a pharmaceutically active agent comprising:
- a) a reservoir comprising a therapeutically effective amount of a pharmaceutically active agent;
- b) a substantially continuous, translucent inorganic barrier layer adjacent to at least a portion of the reservoir, wherein the inorganic barrier layer comprises a material selected from the group consisting of indium tin oxide, aluminum oxide, silicon oxide, aluminum-siliconoxide, aluminum-silicon-intride, and aluminum-silicon-oxy-nitride, and wherein the inorganic barrier layer is greater than 10 nm and less than 100 nm thick; and
- c) a backing film substrate, the inorganic barrier layer directly adjoining the backing film substrate;

wherein the device is translucent.

- 2. (Cancelled)
- 3. (Cancelled)
- 4. (Cancelled)

5. (Withdrawn) A transdermal drug delivery device for delivering a pharmaceutically active agent according to claim 1, further comprising a layer comprising a polymer adjoining the

inorganic barrier layer.

6. (Withdrawn) A transdermal drug delivery device for delivering a pharmaceutically active

agent according to claim 5, wherein the polymer is crosslinked.

7. (Withdrawn) A transdermal drug delivery device for delivering a pharmaceutically active

agent according to claim 5, comprising a plurality of inorganic barrier layers.

8. (Withdrawn) A transdermal drug delivery device for delivering a pharmaceutically active

agent according to claim 5, comprising a plurality of layers comprising a polymer.

9. (Withdrawn) A transdermal drug delivery device for delivering a pharmaceutically active

agent according to claim 5, wherein the polymer is a polyacrylate or polymethacrylate.

10. (Original) A transdermal drug delivery device for delivering a pharmaceutically active agent

according to claim 1, wherein the inorganic barrier layer directly adjoins the reservoir.

11. (Cancelled)

12. (Canceled)

13. (Original) A transdermal drug delivery device for delivering a pharmaceutically active agent

according to claim 1, comprising a plurality of inorganic barrier layers.

14. (Original) A transdermal drug delivery device for delivering a pharmaceutically active agent

according to claim 1, wherein the reservoir comprises a pressure-sensitive adhesive.

3

15. (Withdrawn) A transdermal drug delivery device for delivering a pharmaceutically active agent comprising:

- a) a reservoir comprising a releasably stored dosage of the pharmaceutically active agent;
- b) a flexible, translucent polymeric film backing; and
- c) a translucent barrier adjacent to the polymeric film backing,

wherein the device is characterized in that the moisture vapor transmission rate across the backing and barrier is less than about 2  $g/m^2/day$  and the oxygen transmission rate across the backing and barrier is less than about 10 cm<sup>3</sup>/m<sup>2</sup>/day.

16. (Withdrawn) A transdermal drug delivery device for delivering a pharmaceutically active agent according to claim 15, wherein the barrier comprises an inorganic barrier layer.

- 17. (Withdrawn)A method of drug delivery to a mammal comprising:
  - a) providing a reservoir comprising a pharmaceutically active agent;
  - b) providing a substantially continuous, translucent inorganic barrier layer adjacent to at least a portion of one surface of the reservoir:
  - c) placing the surface of the reservoir opposed to the surface adjacent to the inorganic barrier layer in a delivering relationship to the skin surface of the mammal; and
  - d) allowing the reservoir to remain in a delivering relationship to the skin for a period of time sufficient to provide a therapeutic effect.
- 18. (Withdrawn) A method of drug delivery according to claim 17, wherein the reservoir directly adjoins the skin.
- 19. (Withdrawn) A method of drug delivery to a mammal comprising:
  - a) providing a transdermal drug delivery device according to claim 15;
  - b) placing the device in a delivering relationship to the skin surface of the mammal; and
  - allowing the device to remain in a delivering relationship to the skin for a period of time sufficient to provide a therapeutic effect.

20. (Withdrawn) A method of drug delivery according to claim 19, wherein the reservoir directly adjoins the skin.
